1. Welcome

NutriTrack is designed for ordinary life. You eat, walk, train, drink water, check your progress, and move on with your day. The app should support that rhythm, not interrupt it.

The product works best when it feels almost invisible. Instead of forcing you into a rigid ritual, it gives you a light structure around meals, movement, water, and progress, then steps back.

NutriTrack is especially useful when:

- you want to keep food records consistently without turning it into a chore;
- you want to see meals, activity, water, and trends in one place;
- you want a clear path to reports, premium access, and support.

In practical terms, this means the app is not trying to turn daily self-care into admin work. It is there to help you notice patterns, make better decisions, and keep a record that still feels human.

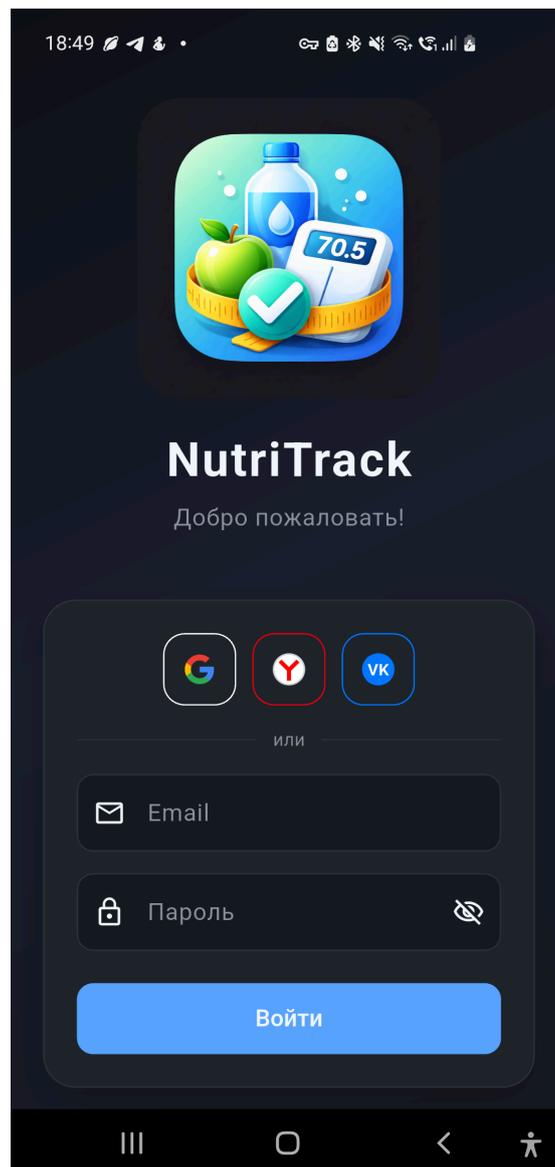

Why the experience feels lighter

- You can log things by voice, photo, or text.
- The main screen gives you the shape of the day at a glance.
- The watch helps when your hands are busy or your phone is not nearby.
- The billing cabinet feels like a continuation of the app, not a separate foreign system.

2. Your first few minutes

2.1 Sign in and settle in

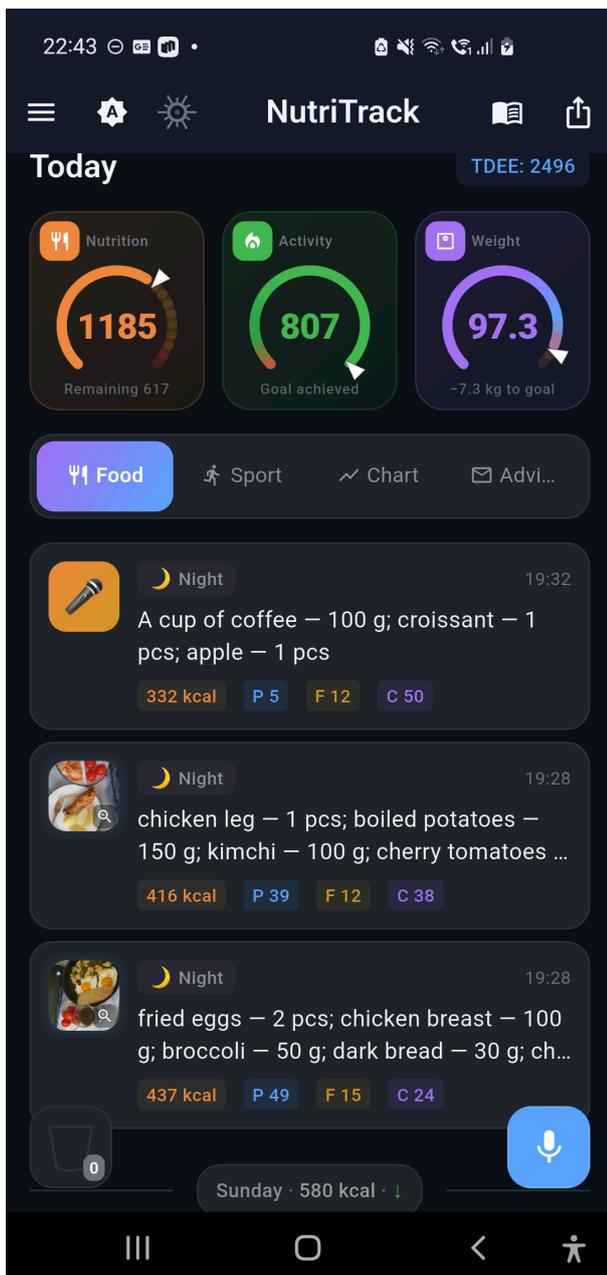

When you open NutriTrack for the first time, the goal is not to learn everything. It is enough to sign in, look around, and make one simple entry. If you normally sign in with social login, the same habit can carry over to the billing cabinet as well.

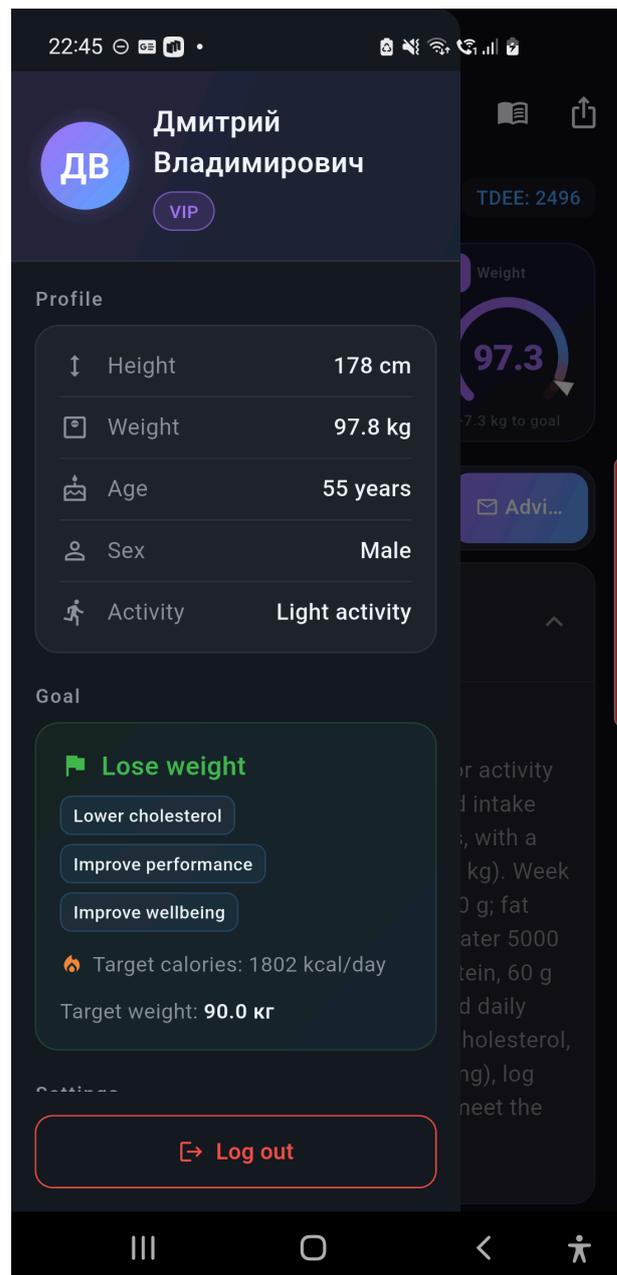

A calm and familiar start.

2.2 A good first session

1. Open the home screen and look at the overall layout.
2. Add your first meal by voice.
3. Visit the activity tab.
4. Add one glass of water.
5. Open the side menu and notice reports, settings, and the billing portal entry.

The home screen gives you your day in one glance.

The side menu brings profile, reports, settings, and billing together.

3. How the phone app feels in daily use

The app is built around a simple idea: the most important actions should be close to your thumb and easy to understand without explanation.

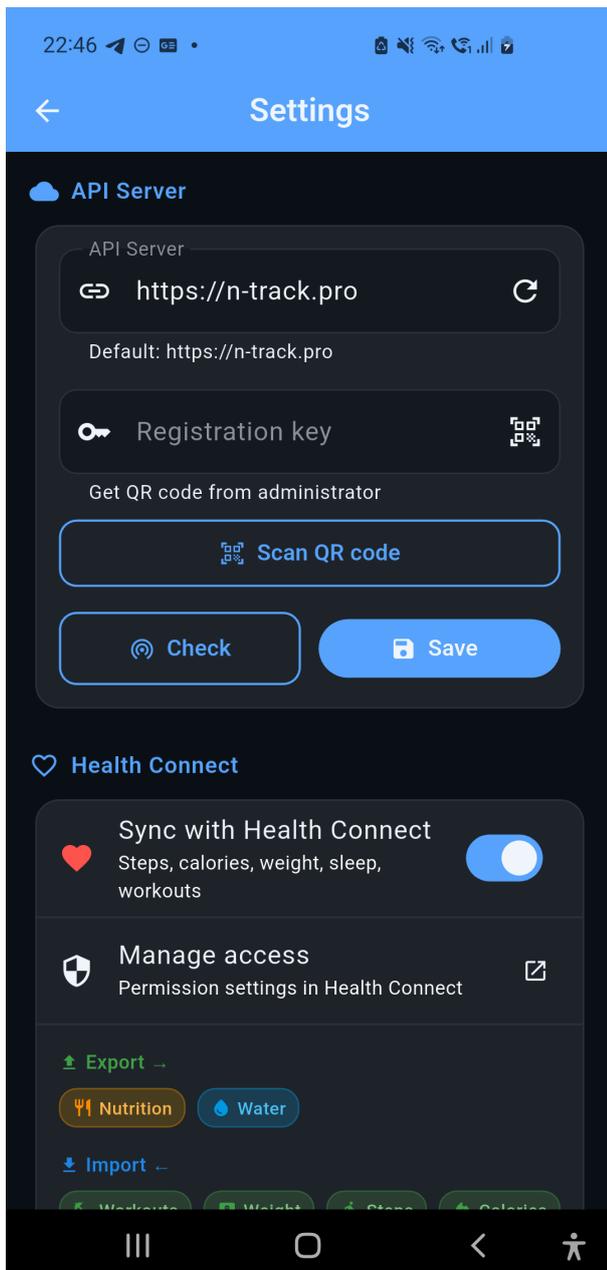

For many people, this daily screen becomes the emotional center of the product. It is where the day starts to make sense: what you have already logged, what still feels unfinished, and what small step would help next.

What the daily screen usually gives you

- your current calorie picture for the day;
- quick access to food, activity, charts, and coaching;
- water and weight as part of one routine, not hidden in utility screens;
- one main action button for logging something new.

3.1 Menu and settings

The menu is the quiet control center of the app. It leads you to profile settings, personal goals, reports, integration settings, and the billing portal.

Settings and personal preferences.

The activity view keeps movement and body data close to everyday logging.

4. Logging meals

The best meal log is the one you actually keep. NutriTrack is meant to reduce friction so that logging becomes a habit rather than a project.

4.1 Voice

Voice is the most natural option for most people. Press the add button and describe your meal like you would describe it to a person.

Helpful examples:

- *“Oatmeal with banana and coffee.”*
- *“Chicken, rice, and vegetables for dinner.”*
- *“Greek yogurt, berries, and a spoon of honey.”*

If you want a broad daily picture, speak naturally. If you want more precision, include portion sizes or weights.

4.2 Photo

Photo works well for mixed meals, cafe food, and home plates that are easier to show than describe. A quick picture before you start eating usually gives the cleanest result.

4.3 Text

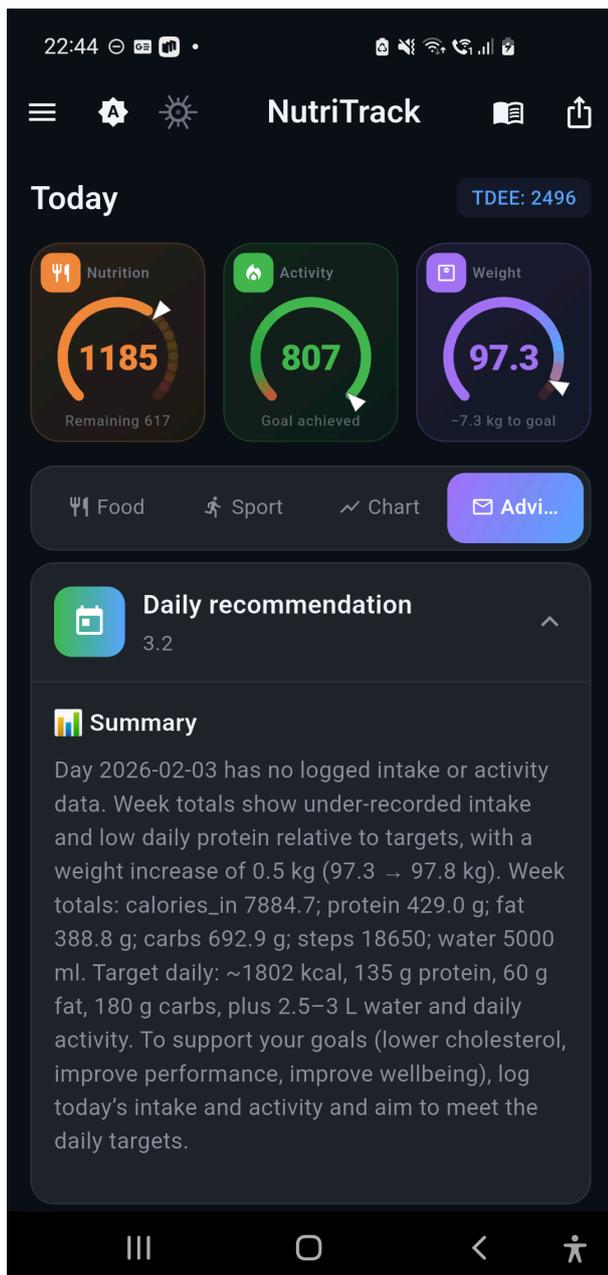

Text is useful when you are in a quiet place or simply do not feel like speaking out loud. A short honest phrase is enough.

A small habit that pays off

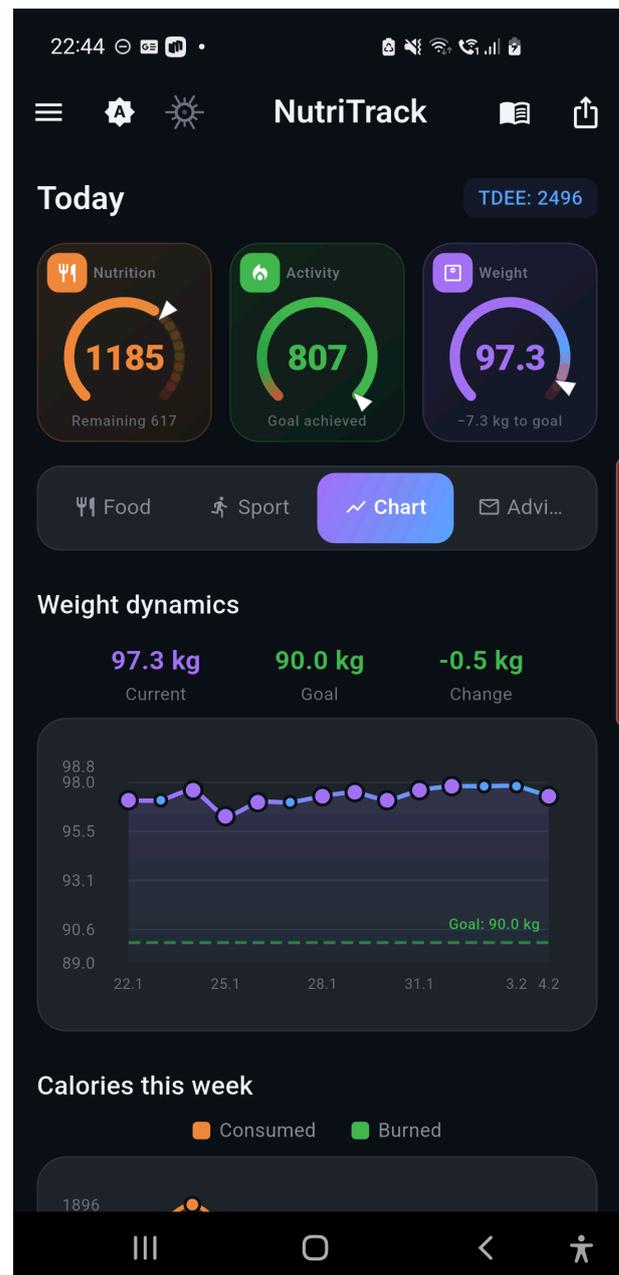

Do not wait for the perfect entry. A simple, timely note is usually more useful than a perfect meal description you never end up writing.

5. Activity, water, and weight

NutriTrack treats movement as part of the same daily story. A walk, a workout, a glass of water, and a morning weight entry all belong together.

Coaching turns raw data into gentle direction.

Reports are prepared in a format that is easy to share and revisit.

5.1 Activity

You can use the same three input styles:

- voice — “Ran five kilometers.”
- text — “Yoga for 40 minutes.”
- quick body data — “Morning weight 74.8.”

5.2 Water

Water is intentionally simple. You should be able to add it without leaving the flow of your day.

5.3 Weight

Weight entries become more meaningful when you record them under similar conditions, such as in the morning before breakfast.

6. Reports, coaching, and your personal cookbook

NutriTrack is not only a logbook. It also helps you reuse recipes, understand patterns, and share a clear picture with a nutrition professional if needed.

- **Reports** let you generate a readable summary for a chosen period.
- **Coaching** highlights trends and gives practical guidance in plain language.
- **Cookbook** saves your regular dishes so you can refer to them quickly later.

7. The billing cabinet in your browser

The billing cabinet is the practical place where access status, plans, payments, support, and legal documents come together. It should feel clear, quiet, and trustworthy.

The usual flow is simple:

1. Open the menu or profile in the app.
2. Tap the billing portal entry.
3. The browser opens your cabinet.
4. You can check access status, choose a plan, review payment history, and contact support.

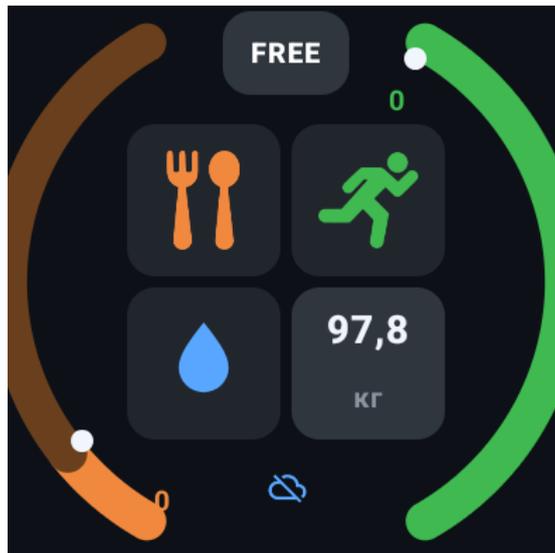

If you use social login, the cabinet can open through a secure link without forcing you to type a password again. If you use email and password, that familiar sign-in path stays available as well.

What the cabinet is for

- checking whether your access is active;
- extending premium access with a clear plan choice;
- reviewing payment history;
- opening refunds, terms, privacy, and contact information;
- reaching support when something needs attention.

8. NutriTrack on your watch

The watch experience is there to save attention. It is useful when you are walking, cooking, training, or simply do not want to unlock your phone.

The watch app keeps the main actions close: food, activity, water, and a quick overview.

8.1 What works well on the watch

- dictating a meal;
- dictating an activity entry;
- adding water quickly;
- glancing at weight and calorie indicators;
- seeing short status messages such as connection issues or successful delivery.

8.2 How to think about the watch companion

It is not there to become another complicated device. It exists so that logging fits the moment you are already living through.

That is the right way to think about the watch overall: not as a miniature control panel, but as a gentle shortcut back into the habit whenever your hands, time, or attention are limited.

9. Health integrations and privacy

NutriTrack can read data from Health Connect and other compatible health apps. This helps with steps, activity, and similar daily indicators without asking you to duplicate everything manually.

What matters here

- health sync is optional;
- the user stays in control of permissions;
- the feature is meant to reduce effort, not add work;
- the app is still fully usable even if you keep health sync turned off.

10. Helpful tips and common questions

10.1 How to get better results

- speak naturally, but add a little detail for complex meals;
- include weights when precision matters;
- take food photos before eating;
- log now rather than planning to remember later.

10.2 What to do when something goes wrong

Situation	A calm next step
No internet	Review what is already in the app and add new entries once the connection returns.
The result looks off	Open the entry, adjust details, or create it again with a clearer description.
You need a report	Open the menu and generate a report for the period you need.
You want to extend access	Open the billing cabinet and choose the plan that fits you.
You have a payment question	Use the support path inside the billing cabinet.

11. A final note

NutriTrack works best when it feels ordinary. A short voice note, a quick water entry, a glance at your balance, and a report when needed — that is already enough for the app to become genuinely useful.
